

# AAA Production Inc.

## MOPA Purchase Agreement

Effective Oct, 2018

In this agreement, AAA Production, Inc. will be referred to as the manufacturer and you will be referred to as you or the purchaser. You will be contracting with the manufacturer to build you a 1930's – 1950's style RF (Radio Frequency) M.O.P.A. (Master Oscillator Power Amplifier) amplifier and will take full responsibility for the instrument and understand it comes with no medical claims, written or implied. This instrument is built to order under contract and may take 72 hours to ship the order. The instrument comes with a limited two year parts and labor warranty. The only exception is the 812a internal vacuum tube. It comes with a 90 day warranty due to the fact that this is the manufacturer's limited warranty. The only limit on the warranty is if the purchaser has in any way abused the instrument by not keeping the milliamp meter power range at 240 milliamps or less. If this is the case, then the purchaser will be required to pay for the parts necessary for repair. The labor to repair the instrument will be covered under the warranty. The best power range is 200 to 220 milliamps for longer 812a vacuum tube life.

The purchaser understands and takes full responsibility for the use of this instrument. In order to avoid problems certain precautions should be taken to make sure that you do not interfere with anyone else. The following important precautions must be followed. Please note that these precautions are not all inclusive to fit your particular circumstances:

1. Be a good neighbor. If you live in an apartment or condominium always put the instrument on an outside wall away from your neighbors. It could disrupt their computer, radio or television that may be on the opposite side of the wall only on to two feet away. The two red and black wires on the gas plasma tube, that plug into the M.O.P.A antenna connections, are connected with shrink wrap. NEVER remove the shrink wrap holding the two wires together. If you do the instrument may broadcast up to 1/3<sup>rd</sup> of a mile and bother your neighbors. If for some unknown reason you just happen to bother your neighbor try using the instrument when they are not home, late at night, or early in the morning.
2. The M.O.P.A and GB-4000 have a 60 day money back guarantee. If you choose to return the equipment you will be refunded your purchase price less a 10% restocking fee.
